1.About us

1.1. Scientia Peritajes

Scientia Peritajes is an expert company in the execution of health appraisals (medical malpractice reports, work incapacity, assessment of the extent of disability, assessment of bodily injury, and various technical reports), that offers its clients the experience of active specialists in various medical specialties and other health professionals (nursing, physiotherapy, sports science, and physical activity, among others), for the preparation of reports with a high scientific rigor that together with our experts in forensic medicine guarantee an excellent value in the content of such reports.

1.2. Focus of action

Our focus of action is to achieve excellence in the preparation of expert reports, providing the client with all the ethics, knowledge, transparency, quality, and objectivity, offered by the professionals of our company, with the added value of the experience after years of performing health appraisals and attending court proceedings for their ratification.

The responsibility and preparation of our professionals and the continuous updating both in forensic medicine and in the health and expert field, allow us to carry out expert reports according to the current technical and scientific knowledge.

1.3. Medical directorate

Our Medical Directorate is led by [Dr. Gonzalo Segrelles Calvo](#), Bachelor of Medicine and Surgery from the Universidad Miguel Hernandez de Elche, Doctor in Medicine from the Universidad Autonoma de Madrid, Honorary tutor of the Universidad Rey Juan Carlos, and specialist in Pneumology.

Dr. Segrelles has extensive experience in the preparation of expert reports in various medical areas thanks to his specialization with a Master's Degree in Forensic Medicine, a Master's Degree in Bioethics, Quality, and Patient Safety, and as a University Expert in Assessment of Bodily Injury and Assessment of Work Incapacity. The Medical Directorate of Scientia Peritajes, puts at your disposal the experience of Dr. Segrelles, providing a differential value thanks to his more than 1000 reports made in the last 12 years, among which we can mention:

- Medical malpractice reports of all medical and surgical specialties
- Reports of assessment of bodily injury, reports of challenges to the discharge
- Permanent disability and major disability assessment reports
- Disability assessment reports
- Technical reports, attendance on more than 250 occasions to court for ratification of such reports.

2. Areas of activity

2.1. Health liability

Our company has a high level of experience and knowledge in the preparation of health liability reports. Initially, an analysis of the submitted documentation is carried out, together with an assessment of the patient, either in person or online, issuing the corresponding feasibility report and case orientation reports. When required, a complete praxis report will be prepared, together with the determination of the sequelae and the assessment of the damage, carried out by medical specialists, accompanied by its ratification and defense in court if necessary.

We also prepare reports on loss of earnings, reports, and determination of the extent of disability reports for mutual insurance companies for work accidents, and health studies and reports for workers.

The whole process is carried out in direct communication with the client so that the transparency, objectivity, and quality in the preparation of the expert medical report are excellent.

2.2. Assessment of bodily injury

Our company has a high experience and knowledge in the preparation of bodily injury assessment reports, also known as VDC, to search, evaluate, classify, and report injuries, sequels, damages, pain, discomfort, or incapacities that may cause harm to a person due to an accident, medical negligence, aggression or disease.

We have highly experienced medical specialists, who are in charge of assessing, observing, measuring, and classifying the damage caused to the body by an accidental event.

They will be in charge of assessing the health condition of people who have suffered an injury and are responsible for preparing a report to determine the time of temporary damage and permanent injuries, also for guiding the quantification of the corresponding compensation to the client and/or their relatives, as the case may be.

When we talk about bodily injury we are referring to:

- Aesthetic loss or damage
- Moral damage due to loss of quality of life as a result of the injuries suffered
- Physical injuries
- Psychological injuries
- Disability

All these sections are quantified according to the Scale of Law 35/2015. Sometimes, the degree of limitations perceived by the client does not correspond exactly or can be classified in a particular degree according to the Scale. Our experts will explain each of these points in detail and will solve all your doubts throughout the process so that you understand perfectly all our assessments.

2.3. Health mediation

Through health mediation, we work on conflict resolution, in which the parties voluntarily promote to reach by themselves a peaceful and positive agreement, with the support and help of an impartial, independent, and neutral person, with the purpose of creating a safe space in which the parties communicate in equal opportunities and with total confidentiality.

Our mediations follow the following steps to achieve the ultimate goal, which is the satisfaction of all parties involved with the agreements voluntarily reached:

- First meeting to make contact with the parties, assessment of the feasibility of the mediation.
- In-depth sessions separately or together with the parties.
- Session of initiation of the mediation and establishment of the same: individual and joint sessions.
- Mediation agreement and closing.

The professionals of Scientia Peritajes have a high experience in facilitating agreements, effective communication between the parties, adapting the vision to the reality of what happened both personally and legally, and promoting satisfactory agreements in the estimated time.

2.4. Medical and expert Advisory

With the aim of facilitating access to sufficient and necessary knowledge of forensic medicine and health law, we provide you with specialists in the medical, legal, and expert areas, who explain to the user the rights and obligations of the patient and the provider of the medical service.

The client is informed about the real situation and feasibility, both at medical, legal, and expert levels, and is advised objectively in each specific case.
